

There are music notation programs that can produce tabs with more information than is found in basic guitar tab. The example below is the same as above but with more info provided; the most important addition being the vertical lines below the numbers. These represent note durations as used in standard notation. For those who understand note durations, the single vertical line represents a quarter note, the last measure contains a dotted quarter note plus an eighth note and finally a half note. For those who don't know what a quarter or half note is (but want to know), see the link to my 'note durations and timing in tablature' hub at the end of this one.

The example below shows another way of including timing and note duration information. The whole note has no symbol, the half notes are shown by a short line, and the quarter notes by a longer line. Eighth notes are shown with their 'flags' (beams) attached and the dotted quarter note, again, is shown with a dot attached.
